CMC 2026 – A Unique Opportunity for Sponsors

The 5th Croatian Microscopy Congress (CMC2026) will bring together a diverse audience of scientists, researchers, and professionals from across Croatia, including representatives from universities, medical faculties, research institutes, and private companies.

Alongside this strong national presence, the congress also attracts an international community of experts in microscopy and imaging.

CMC2026 offers sponsors a unique platform to showcase products, technologies, and services to a highly engaged scientific and professional audience.

About the Congress

We are pleased to announce and cordially invite you to join the 5th Croatian Microscopy Congress (CMC 2026) that will be held in Osijek, Croatia, from 16th – 18th September 2026.

The Congress is organized by the Croatian Microscopy Society in collaboration with the Faculty of Agrobiotechnical Sciences Osijek and the Faculty of Medicine Osijek.

CMC 2026 will bring together scientists, researchers, and professionals working in all areas of microscopy and imaging, covering cutting-edge developments and innovative applications across a broad scientific spectrum.

Topics include advanced methods in materials science, life sciences, environmental microscopy, and more. This year we also celebrate a remarkable milestone; 50 years since Croatia's first scanning electron microscope was installed, marking half a century of microscopy advancement in the region.

We expect an international audience of researchers, clinicians, and industry partners, offering sponsors a unique opportunity to showcase products, technologies, and services to a highly engaged scientific community.

Topics

CMC2026 will cover a broad spectrum of microscopy-related research areas, including, but not limited to:

Materials Science

- Nanomaterials and engineered nano-architectures
- Thin films, interfaces and advanced surface characterization
- Metals, alloys and metal-matrix systems
- Ceramic and inorganic functional materials
- Polymers, soft matter and organic materials
- Composite structures and hybrid materials
- Semiconductors and imaging for information technologies
- Amorphous solids, disordered systems, liquid-crystalline phases and quasicrystals
- Magnetic, ferroelectric and superconducting materials
- Geological, mineralogical and archaeological materials

Life Science

- Cellular structure and function in vivo; ultrastructure of cells and organelles
- Architecture of macromolecules and supramolecular complexes; intracellular dynamics
- Microbial and viral imaging
- Plant biology, fungi and related model systems
- Environmental and ecological microscopy
- Innovations in immunohistochemistry and cytochemistry
- Developmental biology, embryology and neuroscience
- Symbiosis, organismal interactions and biodiversity
- Quantitative morphology and morphometrics
